

# General Flexible Oil Hose Statement

Latest issue 01-04-19

These hoses have been designed to provide a safe flexible connection between the burner and the incoming oil supply on oil burner installations.

*Please note: If the hose is used for other non-heating oil applications then the warranty is void including Non-standard oil applications*

## Green Bio Flexibles

These hoses now have a 3-year Warranty (as of 1<sup>st</sup> April 2019, 2 years prior to this date). from the date stamped on the crimp

The hose must not be kinked or stretched.

## Steel Braided Flexibles

EOGB no longer provide braided flexible oil lines.

## Black High Pressure Flexibles

These hoses have a 1-year warranty from the date stamped on the crimp.  
The hose must not be kinked or stretched.

## Recommendations

We recommend that the hoses are replaced if there are any signs of cracking, kinking or abrasions. If in any doubt regarding the age of the hose, then it should be immediately replaced.

All hoses have been manufactured from high quality materials, but like all rubber and plastic materials they do eventually change their characteristics due to varying environmental, operating and site conditions.

It is impossible to establish the internal condition of the hose to decipher if any degradation has taken place. It is highly recommended to adhere to Oftec guidelines where it is stipulated that hoses are changed during the annual service and/or no more than 1 year after the warranty expiry date which is stamped clearly on the hose crimp.
